

National University of Computer and Emerging Sciences, Lahore Campus

Course: Advance Computer Architecture
Program: MS(Computer Science)
Duration: 30 Minutes
Paper Date: 07-02-2017
Section: A
Exam: Quiz 1

Course Code: EE502
Semester: Spring 2017
Total Marks: 30
Weight: 3.5
Page(s): 2

Q1: Consider three different processors P1, P2, and P3 executing the same instruction set with the clock rates and CPIs given in the following table [10 marks]

Processor	Clock Rate	CPI
P1	5 GHz	4.0
P2	1 GHz	2.0
P3	10 GHz	5.0

(a) Which processor has the highest performance? Show complete working.

(b) If processor P2 executes a program in 30 seconds, find the number of cycles and number of instructions.

Q2: load R1, 100(R4)
 and R4, R5, R1
 add R2, R5, R4
 store R2, 100(R4)
 sub R3, R4, R2

Find all types of hazards in above code. If there is a hazard between two instructions 1 and 2, write 1 & 2 in front of that hazard below: [10 marks]

RAW:

WAR:

WAW:

Q3: The 5 stages of the processor have the following latencies: [10 marks]

	Fetch	Decode	Execute	Memory	Writeback
b.	200ps	150ps	120ps	190ps	140ps

A. For a non-pipelined processor: what is the cycle time? What is the latency of an instruction? What is the throughput?

B. For a pipelined processor assume, what is the cycle time in this case? What is the latency of an instruction? What is the throughput?
