For partial marks create a child and wait till it terminates, also print its status of creation and termination.

The odds

Write a program that reads a file and sends the contents of a file to the child. Then child prints the first five characters and then terminates. Parent process must terminate after the child and print the statuses when creating the child process and upon the completion of the child process. Assume the file has more than five characters.

The evens

Write a program that creates a child process. The child process reads input from the user and after reading five inputs the child sends the inputs to parent and then terminates. Parent process shows the data read from the child. Parent process must terminate after the child and print the statuses when creating the child process and upon the completion of the child process
